Abstract

Monkey pox (MPOX) is a new virus that is making the rounds. It causes a nasty rash that lingers on, is contagious and takes a few weeks to be healed. Using the techniques of vibrational herbal medicine, and our adaptation of ancient laws of wisdom, we have obtained a new analysis of this Virus and a cure that eliminates the (MPOX) in two doses of 1800 mg of the herbal mixture over a period of one day. This analysis has also allowed us to design an herbal vaccine, that prevents infection of (MPOX) for five months. This vaccine is composed of 4 day, two capsules a day, vaccine that prevents infections for five months. Each capsule is 900 mg of the mixture.

Keywords: *Monkey Pox (MPOX); Vibrational Herbal Medicine; Ancient Laws of Wisdom*

Definition

“Mpox, is a viral infection that causes an ugly rash. It is mainly spread by skin-to-skin contact with someone who has mpox. Most people recover within a few weeks.

What are the symptoms?

Symptoms usually begin 7 - 14 days after exposure. This can be a few days or as long as 21 days. Mpox symptoms may include:

- Rashes, pimple-like lesions or sores, particularly in areas that are hard to see such as the genitals, anus or buttocks, and on the face, arms and legs.
- Ulcers, lesions or sores in the mouth.
- People can experience fever, headache, muscle aches, backache, swollen lymph nodes, chills and/or exhaustion prior to the rash or lesions developing.
- The lesions start as a flat red rash that develops into pustules, which form crusts or scabs and fall off.

How to prevent the spread of mpox

- Avoid close contact with people who have mpox.
- Events such as parties or clubs where there is less clothing worn, and therefore a higher likelihood of direct skin-to-skin contact, carry risk of mpox exposure. Avoid any rashes or sores you see on others and minimise skin-to-skin contact.

- Exchange contact information with your sexual partners to assist with contact tracing if needed.
- Avoid contact with any materials, such as bedding or towels, that may have been in contact with an infected person.
- Practice good hand hygiene. Wash your hands with soap and water or use an alcohol-based hand sanitizer.

How is mpox treated?

“The illness typically lasts for 2 - 4 weeks and is mild. Most people with mpox only need regular over-the-counter pain medicines and oral fluids and can be monitored by their GP or treating clinician.

Severe illness can occur, particularly in immune compromised people. A few people may need intravenous fluids and treatment to control fever or pain.

There are antiviral medications available that may help to treat people with severe illness. NSW health.

Introduction

The above information, obtained from the information published by the NSW Health, in Australia; sums up the medical information on this new disease which has become known, and is spreading rather quickly. This the learned findings of the latest in the medical scientific research. We realize that this disease is viewed as quite dangerous and contagious, the treatments for it take a longtime and may, sometimes, not be quite successful.

We are offering another, simpler way to treat and vaccinate people who are the most susceptible to being infected, using our vibrational herbal method, which is based on ancient methods of healing, and has been proven to be very effective in the treatment of many ailments, even though, it has not been publicized.

The vibrational herbal medicine method of healing has been introduced by us and published in a manuscript “Basis of scientific advancement in ancient times”. Almoez LeDin Ellah MS Eltouny. Ecricon, *EC Clinical and Medical Case Reports*, Published: December 30, 2021. The main concept is to identify the cause of the ailment and then identify the shadow energies associated with it, then design a vibrational herbal cure to eliminate such shadow energies.

The cause of monkey pox has been identified as a virus, not an auto-immune disease. The first step is to obtain a specimen of the virus, in our case, it is a photo of the virus, from a microscope. This was published on line from google:

a. The shadow energies of the virus are:

- $Q = -26$
- $Y_n = -26$
- $Y_g = -26$
- $\Omega = -18$.

b. The second step is to identify the parameters of the virus as described by vibrational herbal technique. This indicates that there may be two sizes of the virus, i.e. two strains each with a different volume, but with the same power of the virus, that is the unit of virus is calculated as 10 to the power of 990. The volume of these units is identified as 450 x 1000, and the second is 630 x 1000.

c. We have now to design a vibrational herbal cure to eliminate both volumes of the virus, in the shortest time possible. In order to do that, the base of the cure must be large enough to eliminate all of the two volumes and in a short time. This means that the base of the cure must accommodate both sizes, multiple times over, to affect a rapid cure. Our experimentation led us to identify the base of the cure to be 10,000,000 units of 10 to the power 990. So, the next step is to identify the number of components that will be included in the cure, to obtain an optimum cure, in the shortest time possible, effectively and safely. Several trials are made to try to reach the optimum design of the cure that fulfills our basic requirements. With several trials, on the drawing board, we are able to obtain cures that take four to five days to eliminate the virus. However, we are trying to reach a quick and effective cure in 24 to 36 hours.

d. The cure obtained is composed of the following herbs:

- QYn-Yg
- -Q
- Q-ynYg
- QYn-Yg
- QynYg
- -Q
- Q-YnYg.

These are the shadow energy characteristics of each of the required herbs. These will give our optimum cure, satisfying our basic requirements. We discovered that the cure will consist of four 900 mg capsules, two every 12 hours, that will be sufficient to eliminate the virus. The healing process, elimination of the rash, will take some time to totally heal. However, the virus is eliminated in around 24 hours.

The value imparted to each individual who takes the cure is:

- $Q = 95$
- $Yn = 96$
- $Yg = 95$
- $\Omega = 36$.

These values translate into an elimination force to attack the shadow energies of the virus. The new shadow energies of the virus after the first two capsules are:

- $Q = -10$ after the second dose $Q = 0$
- $Yn = -12$ after the second dose $Yn = 0$
- $Yg = -10$ after the second dose $Yg = 0$
- $\Omega = -7$ after the second dose $\Omega = 0$

This means that the virus is totally eliminated, and the healing process takes its time to regenerate the body.

- e. The question now, is whether or not we are able to obtain a vaccine, powerful and effective enough, to control this virus and safeguard the health of the population.

The concept of creating a vaccine is to discover the level at which the human body will not tolerate the MPOX to penetrate its defenses, and then to design that mixture that is acceptable to the Human body, and can reach the level of protection to prevent the virus from entering. This is a totally new concept which we have used for previous other viruses and has been proven quite effective [10].

- f. It has taken many years to be able to perform these actions, and usually scientific experimentation is not simple as it may seem. We check the specimen of the virus that we have, to check its penetrative power. From experience and experimentation, that power is 12. That is to say if the defenses of the body are less than 12, any specimen of the Mpox virus can enter through the defenses of the body and infect that body, and the cycle of infection takes place. We continue to design the mixture that will increase the level of protection above the value 12, and try to maintain it as long as it can be sustained. We tried several herbal mixtures to reach the optimum value, that is capable of reaching the level 12 in the body and be maintained for a long period, to act as a defense against the virus. We experimented on several different mixtures to import the required shadow energy required to boost the human body’s defenses to reach our required level of protection of 12, and maintain it for several months.

As an example of the mixture: These are the characteristics of each Herb in the mixture, as described by its Chinese characteristics [10]:

- QYnYg
- -Q
- Q-YnYg
- -Q
- QYn-Yg
- -QYnYg
- Q-YnYg

This mixture reached above, is an example of how we proceed; each herb in the mixture is represented by its shadow energy characteristics. The results received are as follows:

- To reach an acceptable level to prevent the virus from infecting a person, the dose for the effective vaccine is two 900 mg capsules every twelve hours, repeated once, that is, 4 capsules in a 24-hour period. This was found to maintain a level above 12, in the person taking the vaccine for a period of 5 months. This period maybe extended by one month, by taking two extra 900 mg capsules, just after 4 months. After the initial vaccine period, the vaccine is re-administered to get anew period of immunity.

As an illustration, the shadow energy value per capsule of the vaccine, will impart the following sustainable shadow energy to each individual, to maintain protection from the mpox virus.

- $Q = 28$
- $Yn = 29$
- $Yg = 27$
- $\Omega = 17$

We took the first batch of the vaccine made 16 months ago. Our shadow energy level against MPOX, today, is as follows:

- $Q = 12$
- $Y_n = 9$
- $Y_g = 9$
- $\Omega = 6$

The value of the shadow energy to allow infection in the presence of the MPOX virus:

- Q Less than 9
- Y_n Less than 6
- Y_g less than 6
- Ω less than 3

It appears that even after 14 months, I am still being protected by the vaccine.

Results

1. From the above expose, we have been able to reach two main conclusions. The MPOX virus is a normal virus, i.e. it has four different shadow energy characteristics, and as such, we may be able to unravel its secrets and reach a cure which is definitive, effective and swift. The cure is composed of four 900 mg capsules, two to be taken, after a meal, followed 12 hours later, by the other two capsules after a meal. After obtaining the cure, we followed through, to design a vaccine to protect from this virus.
2. After some trials, it appeared possible to obtain a vaccine that will protect anyone taking it for a duration of five months. These results are obtained using the ancient techniques used by the ancient Egyptians and ancient Chinese. These have been duly Published in the year 2000, by Explore Magazine, in Prescott, Arizona, USA. It was refined republished and cited in our bibliography [10].

Conclusion

1. We have been able to identify the shadow energy characteristics of the virus causing MPOX.
2. Through this identification, we are able to obtain an effective, safe and swift cure for MPOX, totally herbal with no chemical ingredients, nor any suspicious ingredients. It is safe enough to be taken by children who are able to swallow.
3. This led to the design of a five-month vaccine, to protect against MPOX. This vaccine is totally herbal, and may be extended by one month by taking two extra capsules at the end of the fourth month after taking the first dose. It is safe for children who can swallow. It contains no chemicals nor any suspicious ingredients [1-16].
