Abstract

The coronavirus (Covid-19, SARS-CoV-2) pandemic is the biggest public health crisis since this millennium. Global infection was larger than 250 million now. The large sum of viral infection is attracting intensive medical and healthcare attention. A lot of different problems were emerged. To face with this medical challenge, the covid-19 emergency, especially nursery and workflow is discussed in this editorial.

Keywords: COVID-19; Emergency; Nursery; Viral Infection

Backgrounds

The coronavirus (Covid-19, SARS-CoV-2) pandemic is the biggest public health crisis since this millennium [1-7]. Approximately 250 million infections were occurred worldwide. More important, vaccine develop is diversified and risky in large population evaluation, validity and application [8-9]. An association between emergency and Covid-19 infection and emergency workflow needs to be well understood and groundbreaking [10-11]. The covid-19 emergency, especially nursery and workflow is discussed in this editorial.

Global covid-19 emergency

Covid-19 emergency is a common medical practice all over the world. A unique feature of this medical practice was high transmissibility in treatment, especially to most nurses. Many factors are contributed to this high transmissibility. The clinical emergence condition varies greatly. In the top tier medical hospitals, medical emergency practice was divided between normal people and infectious patients. However, a lot of low tier hospitals, emergency facilities and preventive measures are lacking. It is very harmful for medical personnel, especially nurses.

Nursery service

Nursery plays vital roles for medical services and viral spreads in the hospitals [12-14]. However, they are facing with high-risks of transmissibility in medical service. To boost medical services and reduce the rate of transmissibility, education to nurses is important [15-16]. This kind of education could translate into quality promotion of emergency service and nursery for Covid-19.

Conclusion

To change the covid-19 emergency routine in the clinic, more evolution of medical practice and nursery is indispensable. Among these efforts, nursery serves and education play key roles.

Conflict of Interests

None.
