Abstract

As one of the types of cancer, bone cancer has been extremely difficult to control or cure. This may have been due to the difficulty of recognizing the symptoms, which delayed any type of treatment. Another reason may have been the difficulty in the progress of the treatment, the cancer lingers on and does not seem to disappear. Our expertise in treating bone cancer was very disappointing. It just does not go away. We realized, early on, that bone cancer is a viral disease, and treated it as such. Whenever one CVS in the cancer was eliminated, another seemed to appear. We could not determine how many are there. We recognized, that why they do not go away, is because some of these CVSs are always alive, and become active later on, even when all treatments have been finished. Our discovery, in breast cancer cases, that the cancer is present in clusters of CVSs, and to affect a cure, all CVSs must be eliminated, influenced our thinking. We also discovered that some of these CVSs show some characteristics, that are not congruent with our description CVS, they have three negative shadow energies, instead of four. These are labelled as triple negative CVS's (TN), and they are difficult to eliminate, except for our vibrational herbal medicine, in which we have successfully been able to eliminate any triple negative CVS's. The major bone cancer sarcoma, contains 12 CVS's. Other types may contain six CVS's, with three TNCVS's, or just six CVSs without the TN types. TN types may appear in any type of cancer and we have to allow that in any cancer treatment designed.

Keywords: *Bone Cancer; Vibrational Herbal Medicine; Triple Negative CVS's (TN)*

Introduction

Bone cancer

- About bone cancer
- Symptoms of bone cancer
- Causes of bone cancer
- Diagnosing bone cancer
- Treating bone cancer.

Primary bone cancer is a rare type of cancer that begins in the bones.

This is a separate condition from secondary bone cancer, which is cancer that spreads to the bones after developing in another part of the body.

These pages only refer to primary bone cancer. The Macmillan Cancer Support website has more information about secondary bone cancer.

Signs and symptoms of bone cancer

"Bone cancer can affect any bone, but most cases develop in the long bones of the legs or upper arms.

The main symptoms include:

- Persistent bone pain that gets worse over time and continues into the night.
- Swelling and redness (inflammation) over a bone, which can make movement difficult if the affected bone is near a joint.
- A noticeable lump over a bone.
- A weak bone that breaks (fractures) more easily than normal.

If you or your child are experiencing persistent, severe or worsening bone pain, visit your GP. While it's highly unlikely to be the result of bone cancer, it does require further investigation.

Read more about the symptoms of bone cancer.

Types of bone cancer

Some of the main types of bone cancer are:

- Osteosarcoma - The most common type, which mostly affects children and young adults under 20.
- Ewing sarcoma - Which most commonly affects people aged between 10 and 20.
- Chondrosarcoma - Which tends to affect adults aged over 40.

Young people can be affected because the rapid growth spurts that occur during puberty may make bone tumours develop.

These types of bone cancer affect different types of cells. The treatment and outlook will depend on the type of bone cancer you have.

What causes bone cancer?

In most cases, it's not known why a person develops bone cancer.

You're more at risk of developing it if you:

- Have had previous exposure to radiation during radiotherapy.
- Have a condition known as Paget's disease of the bone - however, only a very small number of people with Paget's disease will actually develop bone cancer.
- Have a rare genetic condition called Li-Fraumeni syndrome - people with this condition have a faulty version of a gene that normally helps stop the growth of cancerous cells.

How bone cancer is treated

Outlook

The outlook for bone cancer depends on factors such as your age, the type of bone cancer you have, how far the cancer has spread (the stage), and how likely it is to spread further (the grade).

Generally, bone cancer is much easier to cure in otherwise healthy people whose cancer hasn't spread.

Treatment for bone cancer depends on the type of bone cancer you have and how far it has spread.

Most people have a combination of:

- Surgery to remove the section of cancerous bone - it's often possible to reconstruct or replace the bone that's been removed, but amputation is sometimes necessary.
- Chemotherapy - treatment with powerful cancer-killing medication.
- Radiotherapy - where radiation is used to destroy cancerous cells.

In some cases of osteosarcoma, a medication called mifamurtide may also be recommended" (NHS).

Read more about treating bone cancer.

The outlook for bone cancer depends on factors such as your age, the type of bone cancer you have, how far the cancer has spread (the stage), and how likely it is to spread further (the grade)" (NHS).

Procedure

1. The above explanation and description are what medical science has discovered about bone cancer. As a researcher in medical treatments, we are using some traditions that have been used previously by the Ancient Egyptians. This is a science which we discovered studying Ancient Egyptian healing techniques. Although, early on, we believed that we were dealing with healing using herbal medicine, our results were more accurate than any herbal medicine made in the healing stage. Our difference was due to the fact that we depended on vibrations of the herbs or plants used, and not their physical or chemical properties. Hence; the name "Vibrational Herbal Medicine" (VHM).
2. Our basis for research is, what is the cause of this ailment? Is it pathological or is it viral or even bacterial? The cause of the ailment definitely determines how that ailment is treated. The Ancients, being mainly the Ancient Egyptians or the Ancient Chinese, described humans as being one of four types. That is, earth, fire, water or air. While herbs and plants were described as being five types: Earth, fire, water, air and neutral. In our present- day investigations, we found very few, or even none of the herbal healing mixtures, being sold in the market, seldom conformed to the real laws of healing designed by the ancients. Even many of the modern Chinese herbal medicines did not seem to conform to the laws of herbal medicine. It is almost impossible to find a true healing mixture that will actually heal all types of humans; i.e. men and women in their four types. It maybe, that they lacked some components that seemed to have been left out over the years, the most important element(s) were, and these were, the main healing vibrations, for both men and women. Four, for each male or female. Without which healing would not be total or complete. That is the most formidable challenge to overcome in any design for a healing mixture or medicine. That which ensures that a virus, bacterial or pathological reason may be overcome, and a person may become totally healed, is by having all of the healing vibrations present. It is interesting to note, that, even all of the chemical medicines made, to effectively cure or heal any person, they all have to have, all eight, or a number of these healing vibrations, to actually be effective.
3. In our initial search for a cure for viral hepatitis C, we started out knowing that science has discovered that the cause of the ailment was viral. With the passage of time, it was realized that this virus has six genotypes, resulting, eventually, in destroying the human liver and creating a great deal of agony for the afflicted patients. In addition, this virus was the cause, later on, for cancer to occur in the liver. We started out with the concept that the cause is a virus, and for several years we were trying to discover the relationship among the different genotypes, and how they differed in their symptoms in the patients, and whether or not there could be one cure

for all genotypes. To do that, we must understand what the structure of any virus could be. After several years of trying, research, trials and hundreds of “healing” mixtures, we reached a conclusion, that the virus is usually composed of two main parts, using our vibrational herbal medicine, nomenclature, one; is the number of replicating complex virus systems (CVS), and the second, is the replicating unit, which is the heart of the Virus. It contains its power, and its volume. This really took close to twenty years to be able to formulate a system, that would enable us to determine the structure of any virus, and hence actually design a cure that contains all the elements of totally curing any patient, male or female.

4. The first patient with bone cancer came to me as a last resort, having been under treatment by chemotherapy and radiation, and my methods were not yet evolved, and could only determine one virus causing the cancer. The mixture given the patient, in addition to whatever other chemo or radiation therapies, did not affect him much. It eliminated a small part of what we conceived the virus is. I did not see any reason to continue. However, one lesson learnt, that the bone cancer is caused by a virus.
5. About twenty years later, with some experience behind me, and a willingness to help, a young lady, as a patient, who was suffering from bone cancer. However, she had had breast cancer before and had a mastectomy. It appeared that the breast cancer was reappearing in the bones. My initial check indicated that it was bone cancer but not the metastasized breast cancer. We identified the one active CVS, and determined its power, size and volume and designed a mixture to eliminate it. The dosage of the mixture was 1800 mg per day after any one meal. The treatment was for a 30 days period, and was supposed to eliminate the CVS during that time. The mixture did work, and the shadow energy characteristics of this CVS became zero. The patient was feeling better, and had high spirits, and seemed to be doing well. She was continuing her bone cancer protocol with her oncologist, and additional help should not be detrimental. However, her tests did not indicate any reduction of the cancer activity. On the other hand, a new shadow energy appeared in my check. While the original CVS was terminated, a new CVS appeared in the picture. Only this one appeared to me, and we quickly designed a new cure for this new CVS. The dosage was similar as before, and the treatment was for another 30 days. The patient responded well to the treatment and the shadow energies started to decline, commensurate with the treatment. The patient was in high spirits, and felt that she was getting better. Our indications were that she was actually getting better, but, again, the X-Ray did not confirm that finding, nor were the tests. No reduction of the cancer activity was indicated, and a new negative shadow energy emerged, indicating a third CVS appearing on the scene. It was becoming apparent that the CVS's in the bone Cancer were more than what we had originally anticipated.
6. For a cancer to behave oddly to our expectations, was not new to us. Cancer appears to baffle the healers, more often than not. We were not an exception. However, due to our long and arduous journey with treatment of cancer, it became apparent that cancers are not from one CVS, but probably had more CVSs, and had to be taken, on a step-by-step approach, until such a time when a more comprehensive treatment strategy be formulated. Simultaneously, we were treating several breast cancer patients that exhibited the same phenomenon, one CVS after another, and some were different in some characteristics. The question started to circulate in my mind, how many different CVSs are there in any Cancer type? It is probably different for each type.
7. We had already discovered four different types of CVSs, in several breast cancer patients, and now with bone cancer, we have discovered three until now, how many more? Based on our own theories, the cancer will not be totally destroyed, if any, unless all the different CVSs are totally eliminated. It appeared imperative, that an accurate discovery of the constituents of the CVSs, of every cancer type, be determined before a total and effective cure can be formulated. The breast cancer patients that we were treating, appeared to have, over a period of time, of about four months, exhibited four different types of CVSs, not in the same order, but varying in the order of appearance. One striking factor, was the appearance of one CVS, in two different cases, not in the same order, but exhibited an unknown phenomenon, of having three negative shadow energies, other than the four, stipulated as a characteristic of a virus, in the laws of vibrational herbal medicine. These CVSs were not affected by the treatment mixtures made for the other four CVSs, and had to be treated by a different mixture. It was unusual that a virus would be having three negative shadow energies, and not four. Not only that, but we had to design a new mixture to treat it.

8. As a consequence of this discovery, of the different CVSs, not similar to the norm; we started to look for that structure in other cancers, as it might be an occurrence to look for. In the case of the four breast cancer patients that we were treating, the length of time for treatment with herbal mixtures, from our perspective, appeared to be coming to an end. We could not eliminate the cancer, and the patients looked for surgery or other treatments, to get treated. We tried, but there was something missing, as we could not get a full picture of the spectrum of the total number of CVSs in breast cancer.
9. Several months ago, a new breast cancer patient, was referred to me to check, and suggest some kind of treatment. This patient is living in Serbia, and this was a friendly referral. The condition of the patient, done by the Oncologists in Serbia, was that the cancer has spread to the lymph nodes and she had a triple negative cancer which, in their opinion quite aggressive. She had to undergo, some chemo, then check by surgery, whether the cancer is genetic or not and whether, they should reevaluate the status, based on the tests taken. However, they insisted that it was the triple negative type and was aggressive. We checked the patient, and discovered that there were three small lumps in the left breast and four small lumps in the right breast. The cancer was still contained, and had not yet spread out to the lymph nodes. The triple negative type was mentioned this time in the diagnosis, and we wanted to know what was the implication of such a diagnosis. We checked the patient again and discovered that there are only two active CVSs in her body. The shadow energies of the CVSs were the regular energies for viruses. There did not appear to be any indicating what might be called "triple negative". To make sure, we went back to our previous patients with the three negative shadow energies, and checked if these would be labelled as "triple negative". Apparently, triple negative was the name that medical science labelled the CVSs with three shadow energies". Triple-negative breast cancer (TNBC) is any breast cancer that either lacks or shows low levels of estrogen receptor (ER), progesterone receptor (PR) and human epidermal growth factor receptor 2 (HER2) overexpression and/or gene amplification "Wikipedia".

They needed a special type of treatment, as the energies were different. Apparently, cancer comes in batches, which we called clusters. Each cluster, contains a different number of CVSs, which may contain the triple negative, or the regular virus [1-20]. In this patient's case, we could not find any triple negative types. However, it seems it is better to err on the side of caution, when dealing with a fatal disease like breast cancer, than lose a patient. It also appears, that until now, medical science cannot identify what a "triple negative" is from the regular type.

10. From this time onwards, we believe that cancer appears in clusters, each contains a number of CVSs, different for each type of cancer, and that may be determined by vibrational herbal medicine. It also appears that some of these cancers contain what is labelled to "triple negative" type CVSs that are difficult to treat. However, it appears that each type of cancer, may in itself have different types of CVSs, that are "normal", four negative shadow energies, or one, two, or more, "triple negative", which we have discovered to have three negative Shadow Energies only. They appear to be more difficult to eliminate than the regular CVSs.
11. To return to our breast cancer patient in Serbia, based on our analysis, and after taking our treatment, she continued to challenge her oncologist, that she does not have the triple negative type, until she was officially declared cancer free, without any drastic surgery.
12. Several weeks ago, a patient was introduced to us as having a great amount of pain in his leg. None of the doctors medication was helping. On our checking the patient, we discovered that he may be suffering from bone cancer. We were dubious, as bone cancer is not a frequent occurrence. On a closer scrutiny, it was discovered that his father had succumbed to bone cancer, several years ago. It was discovered that he had two active CVSs, which we measured, indicated the parameters and designed an herbal treatment. It was prescribed for 30 days, and a dosage of 3600 mg per day, taken once a day. After several days, he appeared to be feeling better. On one of the daily checks, we decided to test the theory of clusters, if it were also present with bone cancer. Surprisingly enough, the bone cancer appeared to be in a cluster formation. What was surprising also was the fact that the cluster had 12 different CVSs in it. The two CVSs discovered earlier were part of this cluster. However, we had to work on determining a treatment for all of the

12 CVSs, to totally eliminate the bone cancer and its cluster. We first had to identify the structure of each of the 10 remaining CVSs, their power and size. We tried to do so, individually. The interesting discovery was that there were no triple negative CVSs in that group. The largest sized CVS in that group was 1,440,000 multiplied by the replicating unit which was 10 to the power 1800. We discovered the smallest sized CVS was 1,000,800 multiplied by 10 to the power of 1800. Safe is it to say, that we assume that all were of the same large size, for design purposes, and to obtain a large enough base to include all different CVSs, the base was taken as twenty times the total number of CVSs in the cluster.

13. The base was an indication of the treatment to be made. It was now a trial-and-error process to determine the right cure, the one that will eliminate all of the shadow energies of all the CVSs in the cluster. Several treatments were tried; each reached a certain level in the elimination of the shadow energies of all of the CVSs in the cluster. One was chosen, that eliminated all of the CVSs in about 25 days. The dosage of this treatment was 3600 mg per day, taken once after a meal. The original treatment to eliminate the two CVSs found initially, was working quite well, and the patient had some relief. This was a good indication of the outcome expected. Actual shadow energies of the cluster of bone cancer in the patient:

Days	0	1	2	5	8	11	15	18	20	22	24
Q	-42	-38	-34	-28	-20	-11	-7	-2	-1	0	0
Yn	-38	-36	-34	-30	-20	-11	-7	-2	-1	0	0
Yg	-31	-30	-29	-24	-19	-10	-6	-2	-1	-1	0
Ω	-12	-12	-11	-10	-5	-4	-3	-2	-1	-1	0

Table

The above results were the actual readings from the male patient. It indicated that the treatment mixture is effective and performing better than expected. After giving the patient, the first cure that was made, we had designed a comprehensive treatment that would eliminate all discovered CVSs in about 25 days. This treatment was immediately given to the patient, on seventh day of the first treatment, and stopped the first treatment. Even as we discovered that the mixture had already eliminated two CVSs, in the cluster. We monitored the status of the patient daily, and he was making a remarkable recovery, totally unforeseen previously. After seven days of the new treatment, the count of eliminated CVSs was five CVSs, and by each passing day, the number increased. After the eleventh day, the count was six, the twelfth day it became seven, and by the fifteenth day the count had risen to ten. The Shadow Energies indicated the changing of the CVSs activities in the patient. The seventeenth day, we had eliminated 85% of the bone cancer cluster. The patient was feeling quite good, no more pain in his legs and he could walk easily and without pain. The course of treatment was continued to the end, even though the indications were that all CVSs were eliminated two days before the last day of treatment. There were no side effects noticed nor were there any complaints from the patient. Two months after the end of the second comprehensive treatment, he is still totally free and functioning normally.

14. The results obtained, in such a small amount of time, does not compare to the amount of time, number of treatments, that had been used before. The difference is due to the concept of Clusters, which we discovered and decided to try in real applications. It cleared the way in breast cancer treatments, and also categorized the types of different cancer types which has eluded us for the previous fifteen years or so. One of the amazing realizations, is that liver cancer, which we had spent years treating as a one virus type cancer, is actually a cluster of CVSs, and once that was realized, it became much easier to predict how and when such a cancer may be eliminated. Some auto-immune diseases, are also explained when using the concept of clusters. It seems, that the reason that residual parts of cancers seemed to appear, sometime after treatments, is because all the CVSs, within the cancer cluster were not eliminated. Another finding is within the chemotherapy treatments. Some do not work at all with some cancers, notwithstanding the type of cancer, simply because it may have been designed to eliminate one type of CVS that had been active when the testing and designing of that chemo treatment. This is based on the fact, that we have seen in many cases, that different CVSs are active, for

the same type of cancer, in different persons, in a different sequence than the other persons. It is not uncommon in cancer types, to activate only one CVS, for some time, before one more, or two more, are activated in a different sequence.

15. Cancer types may include the type identified now in medical science as a “triple negative type”, there are characteristics given by science to this, but the only clear outcome is that it may not be easily cured, and may eventually be the cause of death of the patient. It seems that vibrational herbal medicine, “VHM”, describes the triple negative phenomenon, as a virus that does not follow the rules of viruses’ characteristics. They contain three negative shadow energy forces, but not four. They contain, a negative “Q”, a negative “Yin”, $Yg = 0$, and a negative Ω . Our latest treatments for a comprehensive breast cancer treatment, takes into account the probable presence of triple negative CVSs, and incorporates that in the cure. This is a different way of saying, we do not have to puzzle over the type of chemo or radiation, or red chemo, or surgery, only one treatment will eliminate breast cancer, in about 45 days, for any type of eventuality. However, each case has to be assessed on its own merits, and the best treatment prescribed. We now may have a safe option for breast cancer or other types of cancer treatments.
16. For the last cured patient of bone cancer, we discovered that he had a huge cluster, containing 12 CVSs causing cancer, but it did not have any triple negative types. This may not mean that bone cancer, or any other cancer type for that matter, does not contain triple negative types. What we are able to say, is that we may be able to design treatments to take care of that eventuality, if the need arises.
17. How do the types of bone cancer, in the introduction, compare to our categorization of bone cancer? In the one patient, we discovered that the cancer cluster is huge; twelve CVSs, which would have made impossible to eliminate, not knowing the challenge facing the healer. In all probability, no one would have imagined the vast size and power of such a virus, and therefore would never anticipate that any additional CVSs would still remain after the initial treatment. So, the best thing is to assume, that the treatment has to take a different course, that is, a more rigorous intervention as the cancer was not eliminated in the first instance. However, this may be an over simplification of solving the problem, but we may not be too far off. It appears that the discovery and the presence of clusters have helped in moving the treatments and cure of cancer, a little closer to being realized.
18. Checking on line, we were able to obtain very clear photos of several types of bone cancer. These are used as our specimens, as we are measuring the shadow energies of the tumors in the photos, to try to identify how many CVSs are included in each cluster, and if clusters are different, or their structure is different in any way. This excellent image was produced by Dr. Mohamed Haneefa Nizamudeen, from India.

Figure 1

The study of the cancer, indicated that it is constituted in a cluster, containing 9 CVSs, none of which is indicated as a triple negative type CVS.

Figure 2

The resultant shadow energy of this cluster, which identifies this knee cap sarcoma, is as follows:

- $Q = -45$ the administering of the treatment makes the value $Q = 0$
- $Y_n = -41$ the administering of the treatment makes the value $Y_n = 0$.
- $Y_g = -32$ the administering of the treatment makes the value $Y_g = 0$.
- $\Omega = -26$ 'the administering of the treatment makes the value $\Omega = 0$.

We already made the treatment for bone cancer, based on a cluster of 12 CVSs, and which was quite effective with our bone cancer patient. Trying that treatment on the knee cap sarcoma, indicated that the daily dosage would be 3600 mg per day, taken at once, for a period of 36 days, would eliminate all available CVSs in this cluster, which would be 9 CVSs: 6 regular CVSs, and three triple negative CVSs, in all 9CVSs. The shadow energies indicated may give an indication of the presence of triple negative CVSs, as the Y_g component of the cluster is lower than the other two main shadow energies.

19. We designed a treatment for bone cancer, to the patient we treated, and was totally cured, using this new treatment, which is based on the concept of clusters. Is this treatment valid for this knee sarcoma?

Checking the result of using the treatment on the knee bone osteo sarcoma, indicated that the treatment, which was designed to eliminate all 12 CVSs of the cluster, reacted quite well with the sarcoma. The shadow energies of the knee sarcoma, affected by the treatment were as follows:

- $Q = -50$ The administering of the bone cancer treatment made $Q = 0$.
- $Y_n = -50$ The administering of the bone cancer treatment made $Y_n = 0$.
- $Y_g = -45$ The administering of the bone cancer treatment made $Y_g = 0$.
- $\Omega = -29$ The administering of the bone cancer treatment made $\Omega = 0$.

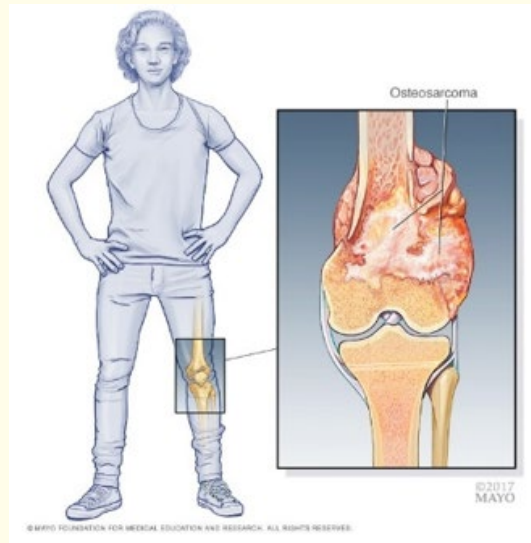

Figure 3

The study revealed that the bone cancer cluster is composed of twelve CVSs, none of which, in this particular case, is triple negative. This may be evident in the fact that the Yg component is relatively smaller than the values of the other two shadow energies. These values are made as an indication of the different types of bone cancer discovered in the literature. The conclusions that may be drawn, are that the cancer in each type is contained in a cluster of CVSs. Each cluster may be different for each case, but they appear to react well with our VHM treatment that is designed to eliminate all 12 CVSs, in the bone cancer main cluster. Our only live trial was with that patient who was diagnosed with bone cancer. The particular variety had twelve CVSs, none of which was a triple negative CVS.

20. In this particular case, enchondroma disease, (Cancer in the shoulder joint).

Figure 4

- $Q = -40$ the administering of the bone cancer treatment made $Q = 0$.
- $Y_n = -35$ the administering of the bone cancer treatment made $Y_n = 0$.
- $Y_g = -40$ the administering of the bone cancer treatment made $Y_g = 0$.
- $\Omega = -24$ the administering of the bone cancer treatment made $\Omega = 0$.

A study of this cancer revealed that its cluster is composed of six CVSs, none of which exhibited the characteristics of triple negative types. We tried the bone cancer treatment (The general type), and reacted well with the enchondroma disease, taking almost 36 days of 3600 mg per day of the treatment, to totally eliminate the six CVSs in the cluster. No triple negative CVSs were found. The shadow energy characteristics of the disease, after treatment are indicated above. However, these results indicate that the cancer energies of the disease were eliminated, but how would the recuperation proceed? How much damage had been done to the bones? How would the curing process be implemented? These will definitely depend on the actual damage done and how it may be repaired. However, one important factor emerges, the danger of the spread of cancer may have been stopped.

Results and Conclusion

- a) Bone cancer is a viral disease.
- b) Bone cancer appears as a number of CVSs within each cluster.
- c) Each cluster contains a different number of CVS's, sometimes these clusters contain another type of CVS called triple negative CVS (TN).
- d) Triple negative CVS (TN), are ones that contain three shadow energy forces, not four as the regular CVS's (They have been readily found in breast cancer).
- e) These TN CVSs are more difficult to treat, and may need a different set of mixtures than the regular CVS's.
- f) Different types of bone cancer may be diagnosed based on the number of CVSs in each cluster.
- g) Some of the bone cancer diagnosed indicate that:
 - General bone sarcoma may contain 12 CVS's, with no TN CVSs found, in this case.
 - Knee cap sarcoma may contain 6 CVS's.
 - Knee sarcoma may contain 12 CVS's none of which, in this case, contains TN CVS's.
 - Shoulder joint sarcoma "enchondroma", will contain six CVS's, none of which are TN CVS's, in this case.
- h) The identified clusters may or may not contain TN CVS's, however, the results are not widespread, to the extent we cannot generalize about the general conclusion.
- i) The possibility exists of mixed CVSs in any cluster identified.
- j) We have been able to design treatments that will account for TN CVSs, when discovered.
- k) Our basic conclusion is that bone cancer is treatable, by identifying the types of clusters it contains, or administering the total treatment containing that for TN CVS's. However, that depends on the extent of the damage done to the bones, once the power of the cancer is eliminated.

The problem lies at how can one, who does not use Vibrational Herbal Medicine, identify such clusters? The solution may lie in a collaborative group effort.
