Abstract

Memory is a vital function in the history of humans. Once it starts to fade, much of a human beings' accomplishments, do not seem real nor his existence appears worthwhile. The person loses touch of his surroundings, friends, relatives and most importantly their whole existence. The advent of Alzheimer's' disease does that to a person. Our endeavor to try to ameliorate the effects of Alzheimer in two ways, one to eliminate the cause of the disease which we have discovered to be viral in origin, and two, to enhance the shadow energies in the brain controlling memory, to stimulate the memory banks and bring life back to a forgotten past.

Keywords: *Memory Loss; Advent of Alzheimer's; Shadow Energies*

Introduction

One of the major consequences of Alzheimer's for patients is memory loss. It may be gradual, but it creeps up on one, especially when they do not seem to realize it. Its effects are quite devastating to many patients and basically causing despair with their loved ones. The life is seen to gradually be withdrawn from a living being and being transformed into a lifeless human who does not know who he or she is. They do not recognize their own families, and drift into their life now and then, never in control any more. Memory loss has been one of the inevitable results of Alzheimer's, but is it? Is it so irreversible, that one may not try to alleviate this situation, even a slight memory gain may bring wonders to a suffering Human.

In one of our studies of some of the patients whom our vibrational herbal medicine (VHM), has helped in alleviating some of the symptoms of Alzheimer's, and which actually eliminated the CVS that was responsible for Alzheimer's, and in essence, cured that patient from the deterioration of the consequences of having Alzheimer's; we noticed that memory loss is indicated as a decrease of the shadow energy controlling memory. Our following question was: could we actually improve the memory function of that patient, and regain some of that forgotten memory, by manipulating the increase in the shadow energy controlling memory, to bring back some of the memories we thought of, as lost to time?

In this particular instant, the shadow energy controlling memory of that patient, a male, 70 years old, whom we treated for Alzheimer's, several months before, and was forgetting minor things that he always remembered.

The shadow energy of his memory was:

- Q = 27
- Yn = 25

- Yg = 29
- Ω = 12.

In contrast, the shadow energy of a male of the same age, in normal conditions and not suffering from any of the old age diseases, was:

- Q = 65
- Yn = 64
- Yg = 69
- Ω = 25.

The difference between the two values may attribute to memory loss. To determine this, we checked several other patients whom we had eliminated the CVS responsible for Alzheimer's, and found that all had a diminished value for their shadow energy for memory.

Our task became clear, if we could design a memory enhancer, to increase the value of the shadow energies controlling memory, and make sure it actually enhances the shadow energies controlling memory, then we can affect a tremendous change in the condition of many Alzheimer patients, throughout the world. It may even work on people who are experiencing a gradual loss or decrease in recalling certain events or tasks in everyday living.

We set to design the mixture that will interact with memory functions for all male and female patients, to increase memory shadow energies and check whether or not such an increase in the shadow energies is translated to a recovery of some of the memories that were thought to have been lost.

Our efforts culminated in reaching three designs of three mixtures that are able to interact with Shadow Memories of all male and female types.

The most efficient, and reacted with all types, is the following mixture:

Memory enhancement mixture:

1. Q Yn -Yg
2. Q -Yn Yg
3. Q Yn -Yg
4. -Q
5. Q-Yn Yg
6. Q Yn -Yg
7. -Q.

The above notations are those of the herbs that used, without mentioning each one by name. This mixture was mixed and capsules made for trial on the patients. In this case, it was the 70 years old, Professor of Urology in one of the Egyptian Universities, he had already taken our Alzheimer treatment, which is intended to eliminate the virus causing the disease. The best (Theoretical) results obtained after 15 days of 1800 mg daily dosage of the memory enhancement mixture were as follows:

- Q = 70
- Yn = 69
- Yg = 72
- Ω = 25.

The values are remarkable, and there were no side effects indicated, we made the capsules and presented them to the patient, to start a clinical trial. He started taking them right away, and we kept close watch over the results.

Energy	1	5	8	10	12	14	15 Day
Q = 27	29	39	45	55	60	66	70
Yn = 23	26	38	45	54	59	65	69
Yg = 29	32	39	48	56	62	68	72
Ω = 12	12	14	16	18	20	22	25

Table

The patient was quite impressed with the results as he remembered all of the prayers used during his morning prayers, and he was not at loss for words any more during his clinical hours, no embarrassment with any of his patients anymore. It has been close to a month after these results have been observed.

Another patient was prescribed the memory treatment; however, her condition is much more advanced than the other patient. This patient is 86years old and has already taken, on and off, the treatment specifically made to eliminate the virus causing Alzheimer's, she has been prescribed the memory medication, to improve her memory skills and cognitive abilities. The test made on her showed a marked improvement when she takes the memory medication. This time a care giver will be helping her take all her medications, at the appropriate time.

A third patient, a lady of 76 years of age, had taken the Alzheimer's elimination medication: (Treatment of Alzheimer Disease Using Herbal Medicine), and has progressed so well, that her daughter wanted her to improve her memory even more. The test showed that an approximate increase in memory, would be about 25 to 35%, above her current levels. The memory enhancement mixtures have been used on former Alzheimer patients who have be taken the treatment for Alzheimer, the trials have been successful, it may also be used on older people who may be starting forgetting some of the chores to be done or just plain appear to be more forgetful than before.

There may be a different avenue where we may be able to use this medication. There are many chemical medications whose side effects often impair the shadow energy characteristics of memory. The most convenient way of enhancing memory, in this case is the enhancement of the shadow energies of memory for that person.

Results

1. The trials to enhance the memory of former Alzheimer patients appeared to show a great deal of promise.
2. This memory enhancement technique, will also work with ordinary older people, who appear to be getting slightly forgetful.
3. In general, the medication may be used in cases where memory loss is due to other medication and not a specific ailment.

Conclusion

1. Memory loss is attributed to Alzheimer, however, some of its effects may be alleviated by Memory Enhancement Treatment.
2. This treatment may also be used, by any one suffering minor memory lapses due to age or some drug interactions [1-5].
