The veterinarian in Algeria is a certificate that does not equal interest, complete neglect by the concerned authorities and many contracts facing this doctor who, if he has the possible assistance, will make his country the world leader in the field of veterinary medicine in all its specialties. This is what I will discuss in this article.

Many of you hear the names of Algerian scientists in the field of veterinary or human medicine. Yes, they are of Algerian origin. We do not forget about them, Dr. Mohamed Domir. These people suffered a lot in their countries and their ways were narrowed and they had no solution but to emigrate to a country that hears their opinions and bears the costs of their ideas today. She tops the world's scientific articles.

There is no doubt that I am writing this article today in my country while I suffer from this issue. I cannot describe to you the extent of my frustration. I cannot describe to you the amount of ideas and the amount of inventions that I have in my mind, but how can I implement them and how can I communicate them, the answer: I do not know! I have been practicing this profession since my graduation July 15, 2021, I have performed more than 40 surgeries, most of them are simple and not complicated, but for free only because I am waiting for the opportunity to get me out of this frustration. Cows as if I were cattle. There are no conditions for human life. What do you know about the dignity of the veterinarian? Unfortunately, our screams are inside the rib cage, which is almost exploding.

This profession in my country is ugly with its beauty because it is an honorable profession and its beauty is in its difficulty, but its image is not popular as in many countries, but there are many who do not know the meaning of a veterinarian because he describes you as an animal doctor and the latter has no soul, we must respect and give it value, although I live within an Islamic society, and Islam commands us something that must be implemented is to respect these animals that have no support except their Creator.

In the end, I apologize for my simple article that is full of errors, because it is the first time I write like this, and even if it was not scientific, but it has scientific connotations, Algeria is the country of animal wealth and is the country of science and scientists, but we do not know where the problem is? And how can we get past this?
